Open to backend and platform engineering roles.

EXPERIENCE

Mission Technologies, a division of HII · Remote, Virginia

Software Engineer II · Apr 2025–Present

Software Engineer I · Sep 2021–Apr 2025

- Built distributed pipelines and streaming services for a Monte Carlo simulation platform, scaling concurrent entity support from about 100 to about 2,000 (20×).
- Optimized concurrent message processing in a Java Spring Kafka/WebSocket backend for Vue/Cesium mapping, reducing CPU utilization from about 100% to about 25%.
- Led a monolith-to-microservices migration: defined service boundaries and extracted services while maintaining feature parity.
- Built cloud simulation R&D prototypes connecting Kafka pipelines, Java Spring services, WebSocket messaging, and Vue/Cesium visualization.
- Designed REST APIs with Spring Boot and integrated them with Vue/React interfaces and external services.
- Migrated persistence to Spring Data JPA/Hibernate, using batching, caching, and optimized database access to improve endpoint performance and reduce query complexity.
- Resolved dependency vulnerabilities and CVE findings while maintaining build stability and application compatibility.
- Supported four live customer demonstrations, troubleshooting technical issues with Sales and Product Management and explaining platform capabilities.

TECHNICAL SKILLS

Backend & streaming: Java, Spring Boot, Apache Kafka, REST APIs, WebSockets

Data & delivery: SQL, PostgreSQL, Spring Data JPA, Docker, Git, CI/CD

Frontend: JavaScript, Vue.js, React, Cesium

Additional languages: Scala, Python, Bash

EDUCATION

Bachelor of Science in Computer Science

Old Dominion University · December 2020

Associate of Science in Computer Science

Tidewater Community College · May 2018
